

18x Optical Zoom Analog/IP Speed Dome

CPT1021DM18X

Security Camera w/ Motion Tracking

One of the most versatile and highest quality PTZ speed domes we've ever offered. Available as a standard analog camera configuration or as an IP enabled camera with motion tracking capabilities. IP enabled models can be used at the same time as both an IP camera and a standard analog PTZ camera. Additionally, these cameras (in analog configuration) are compatible with our advanced analytic systems from ioimage. This presents a lower cost motion tracking capability that follows the largest moving object in a scene, or a highly advanced analytic based tracking specifically for following the movements of people and/or vehicles, while ignoring other sources of movement or interference. If you don't need the tracking capabilities simply order the camera as a standard PTZ. You'll still get one of the most precise, dependable cameras available.

KEY FEATURES

- » **Sony Super EXview HAD CCD delivers 0.1 lux sensitivity in night mode, while providing 470 lines of resolution**
- » **360 continuous rotation with a preset pan speed up to 360/sec, manual panning speed from .05 to a full 360/sec**
